

Term	Definition
Flower	A plant part that produces colourful petals and seeds.
Stem	A stem transports water, energy and nutrients from the root to the flower.
Leaves	One of the usually flat green parts that grow from a plant stem and that functions mainly in making food by photosynthesis
Roots	The part of a plant which attaches itself to the ground or to a support, typically underground.

In class, we are learning about key parts of a plant. This means we will be looking at what the parts are and their functions.

As children spend more time in the garden and experimenting with flowers they become more nature driven to green thinking and environmental preservation.

Parts of a Plant

Books to enjoy together at home.
